Professional Experience

Cofounder at QuickQuestion

October 2014 - Present

- Manage product development team through regular meetings, KPI development to ensure successful milestone progress, and go to market strategy development with cofounder.
- Develop front and backend solutions using a combination of NodeJS and Swift to ensure reliability and availability throughout the product.

IT Intern at Meijer (Retailer)

May 2016 - August 2016

- Managed PDF OCR project; designed, developed, and deployed a fully automated linux solution reducing estimated project completion from years to less than a month.
- Converted millions of non-searchable PDFs to a searchable format, increasing efficiency around the company.
- Initiated a massive collaborative effort between different IT teams.
- Designed, and developed a solution within the scope of my internship that saved the company from buying a very expensive alternative.
- Built an internal iOS application from scratch that allows employees to search for where people were around the campus.

Lead iOS Developer at RenewU

July 2015 - October 2015

- Built an iOS MVP from scratch.
- Gained experience in native map functionality, and persistent state changes (similar to the Uber ride experience).
